DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5 and 10-13, drawn to an image display device, which has micro-concave portions and/or micro-convex portions provided to a part of an overall surface of the electrode.

Group II, claim(s) 6-9, drawn to an image display device, which has micro-cutout holes provided to a part of or an overall of the surface of the electrode.

Group III, claim(s) 14-16 and 19-24, drawn to an image display device in which the surface of the substrate to which the particles are contacted is thinly coated by an insulation film.

Group IV, claims 17-18, drawn to an image display device in which an arithmetic average roughness and concave-convex average distance of a surface substrate to which the particle are contacted is satisfied by the following formulas:

$$d(0.5)/10 \geq Ra \geq d(0.5)/200 \text{ and} \\ d(0.5)/10 \geq aSm \geq d(0.5)/1000.$$

Group V, claims 25-34, drawn to an image display device, in which the image display state is read-out by detecting a fly/move current produced when the particles are flown and moved in a pixel.

2. The inventions listed as Groups I – V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I requires micro-cave and/or convex portions provided to the electrode surface, Group II requires micro-cutout holes provided to the electrode surface, Group III requires a substrate

coated by insulation film, Group IV requires an arithmetic average roughness and concave-convex average distance of a surface substrate to which the particle are contacted to be determined by $d(0.5)/10 \geq Ra \geq d(0.5)/200$ and $d(0.5)/10 \geq aSm \geq d(0.5)/1000$, and Group V requires image display readout to be detected by a fly-move current.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chanelle N. Mack whose telephone number is (571) 270-2600. The examiner can normally be reached on MON - FRI 8:00 - 4:00 EST.
